ziadsultan733@gmail.com / 01010556843 / Menoufia, Shebin El-Kom

Summary

Full Stack .NET & Angular Developer with experience in building scalable web applications using **ASP.NET Core, C#, Angular, SQL Server, and JavaScript**. Skilled in designing RESTful APIs, applying SOLID principles, and delivering clean, maintainable code within agile teams.

Skills

C#, OOP, SQL, linq, Entity FrameworkCore, Asp.Net Mvc, ASP.Net Web APIs, SignalR, Redis, Postman, Git, GitHub, Data Structures, HTML5, CSS3, Bootstrap, JavaScript, TypeScript, Angular

Courses

FullStack Web Developer offline Courses with Engineer Ahmed Emam And Online Courses Elzero Web School And Tarmiz Academy

Personal Skills

Strong interpersonal and analytical skills, with a proven ability to solve complex problems, think critically under pressure, and adapt quickly to changing project requirements.

Known for effective communication, time management, and a collaborative approach to working within cross-functional teams.

projects

- **ERP & E-Commerce Management System | Front-End Developer**
- Developed a scalable **ERP Front-End using Angular 20**, covering **Admin, Sales, Inventory & Warehouse, HR, and E-Commerce** modules.
- Built responsive dashboards and reusable UI components using **Tailwind CSS** for managing products, sales, inventory, employees, users, roles, and permissions.
- Integrated the application with backend services using **RESTful APIs and GraphQL**, implementing data-driven interfaces, forms, validation, routing, and API communication.
- Collaborated with another Front-End Developer to deliver a modular and maintainable architecture designed to support future features such as **AI-powered inventory prediction, automated social media marketing, and AI-based reporting**.
- Contributed to the integration between **ERP and E-Commerce workflows**, providing a unified interface for managing business operations and online products.

Technologies: Angular 20 · TypeScript · Tailwind CSS · GraphQL · RESTful APIs

Social Media Platform | Front-End Developer

- Developed a responsive **Social Media Web Application** using **HTML, CSS, JavaScript, and Bootstrap**.
- Implemented user authentication features including **Registration, Login, and Logout**.

- Built user **Profile** pages for managing and displaying user-related information.
- Developed complete **Post Management (CRUD)** functionality, allowing users to create, edit, and delete their own posts.
- Implemented a **Home Feed** displaying posts from different users in an interactive and user-friendly interface.
- Added **Comment functionality**, allowing users to interact with posts and engage with other users.
- Integrated the Front-End with backend services using **Axios** and RESTful APIs for authentication, posts, profiles, and comments.
- Implemented responsive layouts using **Bootstrap**, ensuring a consistent experience across different screen sizes.

Technologies: HTML5 · CSS3 · JavaScript · Bootstrap · Axios · RESTful APIs

Employee Management System | ASP.NET Core MVC Developer

- Developed an **Employee Management System** using ASP.NET Core MVC, enabling administrators to manage employees and departments through a centralized dashboard.
- Implemented **User Registration and Login** with authentication and **Authorization** to control access to protected application features.
- Developed complete **CRUD operations** for **Employees and Departments**, including creating, updating, viewing, and deleting records.
- Implemented relationships between **Employees and Departments**, allowing employees to be associated with their respective departments.
- Implemented **Image Upload** functionality for employee profiles and managed uploaded images within the application.
- Used **Entity Framework Core (EF Core)** for database operations, entity relationships, LINQ queries, and database migrations.
- Applied **Generic Repository Pattern and Unit of Work** to create a clean and reusable data access layer.
- Used **Dependency Injection (DI)** to register and manage application services and repositories.
- Implemented **EF Core Migrations** for creating and maintaining the database schema.
- Built an administrative **Dashboard** for managing accounts, employees, departments, and application data.
- Used **Bootstrap and jQuery** to build responsive and interactive user interfaces.

Technologies: ASP.NET Core MVC · C# · Entity Framework Core · SQL Server · LINQ · Authentication & Authorization · Generic Repository · Unit of Work · Dependency Injection · Bootstrap · jQuery

Talabat E-Commerce API | ASP.NET Core Developer

- Developed an **E-Commerce Backend API** inspired by Talabat using **3-Tier Architecture**, separating the presentation, business logic, and data access layers.
- Designed and implemented core e-commerce entities including **Products, Product Brands, Product Types, Customer Baskets, Basket Items, Orders, Order Items, Addresses, and Delivery Methods**.
- Implemented **Authentication and Authorization** with **JWT Token-based authentication**, including user registration, login, email existence validation, and retrieving the current authenticated user.
- Implemented **Entity Framework Core with Fluent API** to configure entity relationships, constraints, and database mappings.
- Applied **Generic Repository and Unit of Work patterns** to provide a reusable and maintainable data access layer.
- Implemented the **Specification Pattern** to build reusable and flexible queries with filtering, sorting, and related data retrieval.
- Used **AutoMapper** for efficient mapping between entities and DTOs, reducing repetitive mapping logic.
- Integrated **Redis** for caching and improving application performance and reducing unnecessary database queries.
- Implemented dependency injection and separation of concerns across the application's different layers.
- Designed the backend to support core e-commerce workflows including **product management, customer baskets, order creation, and delivery methods**.

Technologies: ASP.NET Core · C# · Entity Framework Core · SQL Server · LINQ · Fluent API · JWT · Redis · AutoMapper · Generic Repository · Unit of Work · Specification Pattern · 3-Tier Architecture

Psychiatric & Addiction Treatment Hospital Management System | Full Stack Developer

- Developed a comprehensive **Full Stack Hospital Management System** using **ASP.NET Core and Angular**, covering **Patient, Doctor, Admin, HR, and Candidate Portals**.
- Designed and implemented the backend using **Clean Architecture / Onion Architecture**, following **Clean Code, Separation of Concerns, and SOLID principles**.
- Implemented **Authentication & Authorization** using **ASP.NET Core Identity, JWT Access Tokens, and Refresh Tokens**, with secure token generation and management.
- Applied **CQRS and MediatR** to separate application commands and queries and build a scalable and maintainable application architecture.
- Implemented data access and entity configurations using **Entity Framework Core and Fluent API**, including relationships, constraints, and database mappings.
- Implemented server-side validation using **FluentValidation** with reusable validation rules across application commands and requests.
- Developed core hospital modules including **Patient & Doctor Profiles, Appointment Booking, Sessions, Patient Medical Files, Progress Tracking, Notifications, Resources, Reporting, and Support**.
- Implemented a real-time **Chat & Messaging System using SignalR**, supporting real-time communication between users.
- Integrated **Hangfire** for background and scheduled jobs within the system.
- Developed separate **HR and Candidate Management** functionality, including HR dashboards and Candidate Portal workflows.
- Implemented file and resource **upload functionality** for managing medical and system resources.
- Built role-based dashboards and management interfaces for **Admins, HR staff, Doctors, and Patients**, providing tailored access to system functionality.
- Collaborated across the full development lifecycle, integrating the **Angular Front-End with ASP.NET Core RESTful APIs** and building data-driven, responsive interfaces.

Technologies: ASP.NET Core • C# • Angular • TypeScript • Entity Framework Core • SQL Server • ASP.NET Core Identity • JWT • Refresh Tokens • CQRS • MediatR • Clean Architecture • Onion Architecture • Fluent API • FluentValidation • SignalR • Hangfire • RESTful APIs
